Duration	5 mins 28 secs
Grade	**14.00** out of 15.00 (**93.33**%)

Question **1**

Incorrect

Mark 0.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 100; What are the mid values(corresponding array elements) generated in the first and second iterations?

- a. 89 and 94 ✗
- b. 90 and 100
- c. 94 and 99
- d. 90 and 99

Question **2**

Correct

Mark 1.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 99; what are the mid values(corresponding array elements) in the first and second levels of recursion?

- a. 90 and 99 ✓
- b. 89 and 94
- c. 89 and 99
- d. 90 and 94

Question **3**

Correct

Mark 1.00 out of 1.00

In binary search, what happens if the middle element does not match the target element?

- a. The list is sorted
- b. The search stops
- c. The search continues from the beginning
- d. The search continues in the left or right sublist ✓

Question **4**

Correct

Mark 1.00 out of 1.00

The average case occurs in the linear search algorithm

a. When the item is the last element in the array
b. When the item is not the array at all
c. When the item is somewhere in the middle of the array ✓
d. Item is the last element in the array or item is not there at all

Question **5**

Correct

Mark 1.00 out of 1.00

In which situation is linear search more efficient than binary search?

a. When the list is large and sorted
b. When the list is small and sorted
c. When the list is large and unsorted
d. When the list is small and unsorted ✓

Question **6**

Correct

Mark 1.00 out of 1.00

In linear search, how is the element searched?

a. By sorting the list first
b. By comparing each element in the list sequentially ✓
c. By dividing the list into halves
d. By using a hash function

Question **7**

Correct

Mark 1.00 out of 1.00

What is the first step in binary search?

a. Compare the target element with the first element in the list
b. Divide the list into two equal parts
c. Sort the list
d. Compare the target element with the middle element in the list ✓

Question **8**

Correct

Mark 1.00 out of 1.00

Which of the following scenarios is best suited for applying binary search?

a. When the list is very small
b. When the list is sorted ✓
c. When the list is unsorted
d. When the list contains duplicate elements

Question **9**

Correct

Mark 1.00 out of 1.00

What type of search would be most appropriate for finding an element in a list that is frequently updated?

a. Hash search
b. Binary search
c. Linear search ✓
d. Interpolation search

Question **10**

Correct

Mark 1.00 out of 1.00

In binary search, if the target element is less than the middle element, where does the search continue?

a. At the beginning of the list
b. In the right sublist
c. In the left sublist ✓
d. In the entire list

Question **11**

Correct

Mark 1.00 out of 1.00

In binary search, how is the middle element determined?

a. By using a hash function
b. By dividing the list length by two ✓
c. By comparing each element sequentially
d. By starting from the first element

Question **12**

Correct

Mark 1.00 out of 1.00

In the context of searching, what is a successful search?

a. When the list contains duplicate elements
b. When the search algorithm finishes
c. When the list is sorted
d. When the element is found in the list ✓

Question **13**

Correct

Mark 1.00 out of 1.00

During a linear search, what is the maximum number of comparisons needed to find an element in a list of size n?

a. n-1
b. log n
c. n/2
d. n ✓

Question **14**

Correct

Mark 1.00 out of 1.00

What is searching in the context of computer science?

a. Inserting elements into a list
b. Sorting elements in a list
c. Determining whether an element is present in a list ✓
d. Deleting elements from a list

Question **15**

Correct

Mark 1.00 out of 1.00

_____ search takes a sorted/ordered list and divides it in the middle.

a. Linear
b. Hash
c. Both (1) & (3)
d. Binary ✓
